

Alice Héron – Ersatz Jungle

Ersatz Jungle is een installatie die kenmerkende aspecten van planten imiteert en zo de architectuur doordringt.

Ersatz Jungle is an installation that imitates some aspects of plants, balancing between repulsive and attractive repetitive shapes. The large organic structures seem to be the result of a natural growth process: they infiltrate the environment and suggest they have always been there. The organic structures penetrate into the architecture and causes a combination of dislocation and beauty.
