

Sensoree – AWE Goosebumps

In a dialog of art and science, SENSOREE therapeutic biomedicine animates the feeling of awe. Awe is the subtle mix of fear and wonder that gives the chills, the shivers up your spine that provoke emotionally based goosebumps called frisson. The latent sense is measured with a series of biosensors to monitor excitement, breath, and heart rate, then expressed with extimacy – illuminated breathing patterns and amplified wonder with silicone inflatables which initiates the peekaboo interaction of kirigami fabric to stand on end like goosebumps. Feel the thrill!
